

Rulebook

General rules and guidelines

- Enter the standardization and certification on all levels of business through projects: product manufacturing, management, ecology...
- It is necessary to form independent commissions immediately from professional and highlighted members, associates and mentors for control on all levels:
 1. Correctness and compliance with procedures , efficiency and up-to-date business;
 2. Compliance with the rules of conduct, mutual relations, relations with consumers; protocol on internal and external movement of goods, logging bar codes, storage and packaging of products.
- Mini virtual and practical markets, stands, organization of fairs, presentation and other will be under the jurisdiction of regional authorities through assemblies at the state and republic level. Instructions and guidelines, types and procedures will be defined by an agreed instruction through the development of marketing and propaganda.
- Mutual communication with active members on global and regional level will be done through software which supports our concept of action and business. The principle

is for it to be transparent and in an open democratic way. Based on the P2P (person to person) information flow version, creating multiple specialized forums (research forum, practical forum, forum for children and youth) will make a clear picture on what we do and improve our whole marketing.

- Respecting the program and development strategy through: efficiency, wide applicability, product utility, priority in preservation of ecology and health are postulates which are unavoidable in making decisions in implementation, development and backing of projects. With an insistence on the creativity of young people and the concept of top manager up to 30 years of age in place of executive directors that will be well compensated:
- Conclusion of quality agreements and clear contracts especially in the following sectors: investment, donation, innovations, franchising etc.
- Respecting moral and ethical rules of conduct, according to all adopted norms and standards within applicable laws. Respecting others through respecting yourself, your strength, logistics, capacity in ways that don't underestimate others.
- Patent technology, innovation, copyright protection, as well as protection of our internet "hives" and latest research on a higher level will standardize our internal

copyright protection protocol. It is also possible for us to eliminate plagiarism and other exploitations that are capable of ruining our reputation with the help of good starting contracts.

- Cash flow from: donations, applied project funds, product selling, memberships and other sources to regulate, predict and prepare for new investments and through phases and in an equal deployment of new projects. Revenues of certain territorial entities belong to those regional centers.
- Particularly pay attention to the RCRRR center (Recycling Center) which needs to be developed through essential principles of the Circular Economy Solutions through larger projects and which will, through the support of the research center (which needs to be developed in the same time), lead us to the essence of our mission which is to restore our planet as soon as possible and to prove to other scientists that it's not "too little, too late". For capital projects, find funds for unhindered development, as well as getting the necessary software for: communication, business, digital publishing.
- Give each person the needed attention. Include children through different programs. Include both visible and "invisible" resources and logistics in our missions.

Conduct educational programs in the form of presentations with eloquent and clear projects with the possibility of practical work. Efficiency, wide applicability, product utility are the basis for the selection of project support.

- Expansion of our organization is our priority. The importance of even 1 member can “light up the fire”. That’s why both the approach and the way of propaganda are important. Our marketing should show just how much life can be easier and healthier with a few simple actions and procedures. Being on the right path and eating healthy food isn’t an incentive on its own. Rather the essence in knowing this is the only way to secure the future.
- If someone asks how we are conceived and how we function, the answer is that we are:
 - State-owned company with top managers,
 - Association which invest all its funds in sustainable, profitable and eco-pragmatic economy and to optimally organize the environment.
 - Cooperation and fast establishment of a working group whose task will be: establishing and maintaining contact with local organizations whose field of work is tied to organic production, ecology, social relations; establishing

creative development relations with small firms and individuals which are working on production and application of biochar and other ecological products

- Rapid establishment of teams for the development of projects in order to quickly apply for much-needed funds for our successful work that would follow all current, relevant competition related to our scope of work
- Quick adaption of the YooY portal to possible readings (with adequate translation) in all languages where are organization operates.
- Due to possible conflicts, conflicts of interest of directors and managers, partner agreements, intellectual properties we are bringing in the decision of respecting Obligated Persons and Relationship in The International Code of Conduct.

Validity in the assembly

16.11.2024

- Procurement and investments are adapting according to the basic program and goals that are set with a plan and program in relation to regional needs. The decision about regional investments is made by regional executive

directors who, in their mandate, bring their own development program which is predicted by the Yooy organization statute.

- Financing and distribution of financial resources will be decided at a joint conference as soon as the conditions are met and at the latest after the formation of 10 regional centers
- Studying and education of all of us through publications, brochures, our journal and magazine which needs to visit first and report on tactics and procedures of manufacturing in countries like Bhutan or Denmark
- Urgent project development for obtaining resources from an expert team with analysis of priorities and methods of access and obtaining information of great importance for certain materials, their composition and method of obtaining, and due to the reduction of the time of our examination and the speed of action in the necessary directions from associations, where the access itself is very expensive, such as the American Chemical Society.

The Yooy organization is prepared for the creation of special firms in partnership with other legal entities. Complex cell is an independent financial (institution, firm, ... ?) that is 100% in the ownership of the Yooy organization making so all of its profit will be placed in the

Yooy projects except in the contractual sense of investing in one's own development.
